

DMG MORI Energy Policy

We at DMG MORI commit ourselves to responsible resource management, long-term reduction of our energy consumption and to constantly improve energy efficiency. We accomplish this through our Energy Management System in accordance with DIN EN ISO 50001. We ensure that all requirements of this regulation are met, and the processes of our Energy Management System are improved continuously.

We regularly check whether

- necessary financial and structural requirements are met.
- all employees are integrated into our Energy Management, e.g. through our GreenOffice Campaign.
- responsibilities are precisely assigned: local energy teams/person responsible at our sites and a central Energy Manager.
- relevant legal obligations are fulfilled.
- energy efficiency, energy usage and energy consumption are evaluated regularly.
- measures to increase energy efficiency are taken.
- energy-efficient products and services are purchased in order to increase energy-related performance – this is implemented within our partner and supplier management.
- our energy management and our target achievements are examined by a regular, independent audit.

In our Sustainability Report we summarize our goals and actions concerning energy efficiency and resource management. It is openly accessible through our website: <https://de.dmgmori-ag.com/>
